Program - Project - Job: SNS-FE Project
MEBT Mechanical Systems

Title: SNS-FE MEBT 30mm & 40mm Beam Position Monitor Mechanical Design

1. Scope

This engineering note describes the mechanical design for the 30mm Beam Position Monitor (BPM) and the 40mm Beam Position Monitor. It includes a drawing list of mechanical components and assemblies, design background, engineering calculations, outside vendor component information, and rendered pictures.

2. Drawings

- 2.1. 25B170 30mm BPM Bellows
- 2.2. 25B171 BPM SMA Feed Thru
- 2.3. 25B172 40mm BPM Bellows
- 2.4. 25B173 30mm BPM Bore Tube
- 2.5. 25B174 30mm BPM Electrode Spool
- 2.6. 25B175 30mm BPM Bellows Seal Flange
- 2.7. 25B176 30mm BPM Fixed Flange
- 2.8. 25B177 30mm BPM Split Flange
- 2.9. 25B178 30mm Beam Position Monitor
- 2.10. 25B179 40mm BPM Fixed Flange
- 2.11. 25B180 40mm BPM Electrode Spool
- 2.12. 25B181 40mm BPM Split Flange
- 2.13. 25B182 40mm BPM Bellows Seal Flange
- 2.14. 25B183 40mm BPM Bore Tube
- 2.15. 25B184 40mm Beam Position Monitor

Copies of all drawings are included in the Appendix

3. Design Overview

The BPM is based on the design of a 20mm stripline beam position monitor (LANL drawing no. 144Y-618019) that was developed at Los Alamos National Laboratory for the ADT CCDTL. The MEBT design differs from the LANL design in that machining the electrodes from a single spool of stainless steel. The base of the spool electrically shorts the electrodes together. The signal is taken from the free end through a microwave feed-through. The slots in the bore tubes (25B173 & 25B183) and the stripline lines on the electrode spool (25B174 & 25B180) were designed to maintain a 50 Ω impedance. (For details of the electrical analysis, see SNS-Technical Note FE-EE-012.) The grounded stripline design

requires half as many feed-throughs and should simplify assembly fixturing.

To maintain the 50Ω impedance, the geometry of the electrode, the slot and the gap between them had to be within a tolerance of $\pm 5\%$ of nominal. The tolerance stack and tolerance sizing calculations are shown in the Appendix. Design issues included sizing the bellows, and having clearance for the mounting hardware.

4. Reference

- 4.1. CCDTL BPM Segment 6/7 20mm Bore, Drawing No. 114Y618019 (Los Alamos National Laboratory)
- 4.2. CCDTL BPM Segment 107/108 25mm Bore, Drawing No. 114Y618050 (Los Alamos National Laboratory)
- 4.3. Ultra-High Vacuum Microwave Feed-Through, SMA Female (Spec Sheet), Kaman Instrumentation Publication SMA-1000-3/95. (Copy of spec sheet included in Appendix.)
- 4.4. Contour Plot of Electrostatic Potential (included in the Appendix).
- 4.5. SNS Technical Note FE-EE-012, *Basic Electrical Design of the MEBT BPM*
- 4.6. Engineering Calculation Notes (included in appendix).
- 4.7. Standard Bellows Company homepage: www.std-bellows.com

5. Fabrication and Assembly Issues

Most of the component fabrication can be done with conventional milling and turning operations. However, the following features will be done using wire EDM:

- Bore tube inside diameter
- Bore tube slots on inside diameter
- Spool inside diameter
- Spool electrode tines

The wire EDM allows for better precision on the tighter profile callouts. It also allows for better thin wall cuts.

Because of the design, it is extremely difficult to make internal welds. External welding is far more practical. To help minimize the problem of virtual leaks caused by external welds, all fabricated components are ultra-high vacuum cleaned and electropolished before being welded into the assembly. Since they will be sitting on the shelf for months after assembly, another cleaning (water based) may be required. The vacuum in the beam pipe will in the 10^{-6} to 10^{-8} torrs range.

The feed-throughs are connected to the electrode tines to maintain electrical contact. The electrode is made of 316 stainless steel and the feed-through conductor is made of TZM (see spec sheet in Appendix D). Because the melting point of TZM is so high compared to 316 stainless steel, these two materials are not well suited for TIG welding. Torch brazing is a potential method, however there is a worry that the heat involved could cause the TZM to crystallize and crack. Another route is soldering. This would require the connection point on each component to be pre-tinned then assembled and heated to make the connection.

ENGINEERING NOTE**6. SNS-FE Personnel**

Appendix C

TOLERANCE STACK UP ANALYSIS

ASSUMPTIONS:

1. THE DIMENSIONS OF THE ELECTRODE AND THE SLOT MUST STAY WITHIN 5% OF NOMINAL (PER RECOMMENDATION OF LARRY DOOLITTLE. (SEE
2. RSS (ROOT SUM SQUARED) METHOD WILL BE USED FOR ALL TOLERANCE STACK UP ANALYSIS

ELECTRODE AND SLOT GEOMETRY

DIMENSION MAINTAIN SOLDER RESISTANCE (PROVIDED BY LARRY DOOLITTLE)

NOT TO SCALE

DIMENSIONS IN MM.

A	→	15.00
B	→	0.889
C	→	1.761
D	→	2.862
E	→	1.703
F	→	1.983

DIMENSION C IS CRITICAL
AT $\pm 5\%$ OF NOMINAL

$$1.761 \pm 0.088 \rightarrow 0.069 \pm 0.0035 \text{ in}$$

TOLERANCE STACKS MUST BE

$$\leq \pm 0.003 \text{ in} \leftarrow$$

DIMENSIONS IN INCHES

A (TUBE DIA)	$1.500 \pm 0.002 \rightarrow 1.499 \pm 0.001$
B (SPOOL DIA)	$1.500 \pm 0.002 \rightarrow 1.501 \pm 0.001$
C (SPOOL DIA)	1.251 ± 0.002
D (TUBE RAD)	0.695 ± 0.002
E (GAP)	

$$E_{nom} = D_{nom} - \frac{A_{nom}}{2} + \frac{B_{nom}}{2} - \frac{C_{nom}}{2} = 0.695 - \frac{1.500}{2} + \frac{1.500}{2} - \frac{1.251}{2} = 0.070$$

$$T_E = \sqrt{T_D^2 + (1/2 T_A)^2 + (1/2 T_B)^2 + (1/2 T_C)^2} = \sqrt{(0.002)^2 + (1/2 \cdot 0.001)^2 + (1/2 \cdot 0.001)^2 + (1/2 \cdot 0.002)^2} = 0.003$$

$$E = 0.070 \pm 0.003$$

DIMENSIONS IN INCHES

A (TUBE O.D.)	1.600 ± 0.004
B (FEED THRU COND)	0.133 ± 0.001
C (C' BORE)	0.042 ± 0.001
D (TUBE SLOT RAD)	0.695 ± 0.002
E (GAP)	

$$E_{nom} = B_{nom} + C_{nom} - \frac{A_{nom}}{2} + D_{nom} = 0.133 + 0.042 - \frac{1.600}{2} + 0.695 = 0.070$$

$$T_E = \sqrt{T_B^2 + T_C^2 + (1/2 T_A)^2 + T_D^2} = \sqrt{0.001^2 + 0.001^2 + (1/2 \cdot 0.004)^2 + 0.002^2} = 0.003$$

$$E = 0.070 \pm 0.003$$

DETERMINE C'BORE DIAMETER & TOLERANCE

DIMENSION IN INCHES

ITEM-PRODUCTS.COM

Appendix D

ULTRA-HIGH VACUUM MICROWAVE FEED-THROUGH, SMA FEMALE

SPECIFICATIONS

Impedance: 50 ohms.

Frequency range: DC to 20 GHz.

VSWR: 1.03:1 max to 3 GHz;

1.15:1 max to 20 GHz.

Insertion loss: 0.10 dB max @ 3 GHz;

0.50 dB max @ 20 GHz.

Insulation resistance: $>10^{12}$ ohms.

Voltage: 1,500 VRMS.

Operating temperature range:

Based on outer body material -

304 stainless steel: 77°K to 573°K
(-196°C to +300°C).

316 stainless steel: 4°K to 573°K
(-269°C to +300°C).

Inconel®: 77°K to 773°K (-196°C to +500°C).

Hermeticity: $<1 \times 10^{-11}$ cc He/sec.

Radiation: >200 megarads gamma.

Connector interface: SMA per MIL-C-39012.

Materials:

Outer body: 304 stainless steel, 316L stainless steel, or Inconel®.

Center conductor: TZM molybdenum per ASTM B365.

Insulator: Al_2O_3 , strengthened boro-silicate seal (130,000 psi compressive strength).

Connector contact: Gold-plated BeCu.

Weldability: Laser, e-beam, TIG.

Custom materials: Cupronickel, monel, and titanium.
